

IDS Ramp

Special cattle truck bridge plate mat

1 Fixing elements

Stainless steel knock-in screw (HIT8-30/62), stainless steel washers (10 x 30 mm) and dowels (for use in concrete) or two-component polyurethane glue.

2 Storage

If mats are not installed immediately, it is better to shelter them from light and bad weather. Before starting the installation, make sure that the temperature is between 8 °C and 30 °C.

3 Support

The support for the mat shall be rigid enough (concrete or wood) and shall have an even surface so that the mat rests on all of it.

Before laying, clean up the support and let it dry.

4 Laying

Unroll the mat on the floor of the cattle truck bridge.

Screw fastening: place the screws on the thick sections of the mat exclusively.

Glueing: mix the glue with the hardener. Spread the glue with a notched trowel. Place the mat and let dry for 24h.

5 Maintenance

Mats can be scraped using a hand scraper and cleaned with a water jet cleaner or a high-pressure cleaner (do not exceed 60 bars and 30 °C).
